Education

RVS College of Engineering and Technology, Coimbatore
B.Tech in Artificial Intelligence and Data Science

November 2022 – May 2026
CGPA: 8.9

- **Relevant Coursework:** DSA, OOPS, Computer Networks, DBMS, ML, Data Visualization, DL

Experience

AI Engineer

July 2026 – Present

LYSARQ SOLUTIONS PVT LTD, Coimbatore, India

- Developed and integrated Electron-based proctoring features for a web-based assessment platform, enabling secure online examinations and desktop monitoring and Implemented teacher monitoring dashboards to review student malpractice logs.
- Performed feature testing, debugging, and issue validation while collaborating with the development team to improve platform stability and functionality using Electron, React, and Node.js, Python, Git.

Data Analyst Intern

November 2025 – January 2026

GRAVITY AI TECHNOLOGY PVT LTD, Coimbatore, India

- Performed large-scale web scraping and automated data collection using Playwright, Selenium and BeautifulSoup, improving data acquisition efficiency by 40%, and processed/cleaned raw datasets to enhance data accuracy for analysis.
- Conducted EDA to identify trends and insights, collaborated with the AI/ML team to prepare high-quality datasets for ML and RAG workflows, and optimized data pipelines to reduce manual effort and improve preparation time by 35%.

Software Engineer Intern

Aug 2024 – Jan 2025

PRISM SOFTWARE SOLUTIONS, Atlanta, GA, USA

- Built and deployed a chatbot using Python and LangChain, improving search and raising user engagement by 30%.
- Improved backend using Python and Firebase, making queries 25% faster and reducing errors by 15%.

Projects

MASTER – Multi-Agent Stock Market Trading Environment

GitHub

- Developed a multi-agent AI trading system with 6 autonomous agents (momentum, mean-reversion, adversarial, and LLM-powered) operating in a shared market with endogenous price impact and risk-aware decision making.
- Integrated a local LLM (Ollama – qwen2.5) and designed a system with regulator controls, circuit breakers, and crash simulation, enabling explainable trading decisions and real-time risk monitoring.
- **Tech Stack:** Python, Flask, React, Ollama (LLM), LangChain, yFinance, Pandas, NumPy, SQLite

Smart Urban Flood Management System

GitHub

- Designed and deployed an IoT + AI system with Arduino and IoT sensors, streaming real-time water level data to Google Cloud Platform (GCP) for monitoring and visualization.
- Built predictive flood risk models in Python with TensorFlow, achieving 92% accuracy and enabling flood prediction up to 48 hours in advance, reducing response delays by 35%.
- **Tech Stack:** Python, GCP, TensorFlow, Arduino, IoT Sensors

Technologies

Languages: Python, SQL

Frameworks: React, Node.js, Flask, Django

AI / ML: TensorFlow, PyTorch, Scikit-learn, NLP, Generative AI, LLMs, RAG, Reinforcement Learning

GenAI: LangChain, LangGraph, AI Agents, Multi-Agent Systems, Embeddings, Vector Databases, Semantic Search, Ollama

Databases: MySQL, PostgreSQL, MongoDB, Firebase

Cloud & Tools: AWS, Google Cloud Platform (GCP), Git, Playwright, Selenium, VS Code, Electron

Certifications

- Python – Udemy (August 2024) • SQL and PostgreSQL – Udemy (March 2025) • Infosys Pragati Cohort-5 (May 2025)
- AWS Certified Cloud Practitioner (November 2024)

Achievements

- IITM ENIGMA Top 5 Finalist (February 2026)
- Selected for INFOSYS PRAGATI COHORT 5 Program out of many applicants (2025)
